

For Immediate Release:

Good news for *all* boaters: New SeaKey® Safety and Security Marine Technology Now Available

Bethesda, MD, June 3, 2008: SeaKey®, LLC, sails into impressive view with its brand new SeaKey v2.0 DM, the latest safety and security development in marine technology. The device is now primed and available for installation on any commercial or recreational watercraft.

The new device houses a dual mode cellular & satellite-based safety & security system which communicates vital information to the SeaKey 24/7 Response Center, as well as to the boat owner's personal website.

The powerful GSM & GPRS wireless technology works much faster than any satellite system. And SeaKey's dual mode technology allows the boat owner to take advantage of a highly reliable backup link, by switching to any one of ORBCOMM's 35 orbiting satellites when cell coverage is out of reach.

Building on the success of the original device, invaluable in recovering stolen boats and rescuing crews in distress, the new SeaKey v2.0 DM offers a variety of novel features, including 2-way messaging and award-winning concierge services. No other equipment is needed.

###

SeaKey, LLC, is the marine industry's leader in the development of telematic products, such as cutting edge satellite communications systems. SeaKey offers a wide selection of services that compliment boater safety, security and enjoyment, including an advanced emergency messaging system that can pinpoint a distressed vessel's location offshore. In addition, SeaKey possesses a stellar record of assisting law enforcement agencies in tracking and recovering stolen boats.
